

## HD3SS3212x Two-Channel Differential 2:1/1:2 USB3.1 Mux/Demux

### 1 Features

- Provides MUX/DEMUX Solution for USB Type-C™ Ecosystem for USB 3.1 Gen 1 and Gen 2 Data Rates
- Compatible With MIPI DSI/CSI, FPDLinkIII, LVDS, and PCIe Gen II, III
- Operates up to 10 Gbps
- Wide –3-dB Differential BW of over 8 GHz
- Excellent Dynamic Characteristics (at 5 GHz)
  - Crosstalk = –32 dB
  - Off Isolation = –19 dB
  - Insertion Loss = –1.6 dB
  - Return Loss = –12 dB
- Bidirectional "Mux/De-Mux" Differential Switch
- Supports Common Mode Voltage 0 to 2 V
- Single Supply Voltage  $V_{CC}$  of 3.3 V
- Commercial Temperature Range of 0°C to 70°C (HD3SS3212RKS)
- Industrial Temperature Range of –40°C to 85°C (HD3SS3212IRKS)

### 2 Applications

- USB Type-C™ Ecosystem
- Desktop and Notebook PCs
- Server/Storage Area Networks
- PCI Express Backplanes
- Shared I/O Ports
- FPDLinkII and FPDLinkIII Switching

### 3 Description

The HD3SS3212 is a high-speed bidirectional passive switch in mux or demux configurations suited for USB Type-C™ application supporting USB 3.1 Gen 1 and Gen 2 data rates. Based on control pin SEL, the device provides switching on differential channels between Port B or Port C to Port A.

The HD3SS3212 is a generic analog differential passive switch that can work for any high-speed interface applications requiring a common mode voltage range of 0 to 2 V and differential signaling with differential amplitude up to 1800 mVpp. It employs adaptive tracking that ensures the channel remains unchanged for the entire common mode voltage range.

Excellent dynamic characteristics of the device allow high-speed switching with minimum attenuation to the signal eye diagram with very little added jitter. It consumes <2 mW of power when operational and has a shutdown mode exercisable by OEn pin resulting <20  $\mu$ W.

## 6 Pin Configuration and Functions

### Pin Functions

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NAME	NO.		
V <sub>CC</sub>	6	P	3.3-V power
OEn	2	I	Active-low chip enable L: Normal operation H: Shutdown
A0p	3	I/O	Port A, channel 0, high-speed positive signal
A0n	4	I/O	Port A, channel 0, high-speed negative signal
GND	5, 11, 20	G	Ground
A1p	7	I/O	Port A, channel 1, high-speed positive signal
A1n	8	I/O	Port A, channel 1, high-speed negative signal
SEL	9	I	Port select pin. Internally tied to GND via 100-kΩ resistor. L: Port A to Port B H: Port A to Port C
C1n	12	I/O	Port C, channel 1, high-speed negative signal (connector side)
C1p	13	I/O	Port C, channel 1, high-speed positive signal (connector side)
C0n	14	I/O	Port C, channel 0, high-speed negative signal (connector side)
C0p	15	I/O	Port C, channel 0, high-speed positive signal (connector side)
B1n	16	I/O	Port B, channel 1, high-speed negative signal (connector side)
B1p	17	I/O	Port B, channel 1, high-speed positive signal (connector side)
B0n	18	I/O	Port B, channel 0, high-speed negative signal (connector side)

- (1) The high-speed data ports incorporate 20-kΩ pulldown resistors that are switched in when a port is not selected and switched out when the port is selected.

**Pin Functions (continued)**

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NAME	NO.		
B0p	19	I/O	Port B, channel 0, high-speed positive signal (connector side)
RSVD1	1	O	Can be left not connected or can be fed to $V_{CC}$
RSVD2	10	O	

## 7 Specifications

### 7.1 Absolute Maximum Ratings

 see <sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC}$	Supply voltage	-0.5	4	V
Voltage	Differential I/O	-0.5	2.5	V
	Control pins	-0.5	$V_{CC} + 0.5$	
$T_{stg}$	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 7.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±500

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_{CC}$	Supply voltage	2.7	3.6	V
$V_{ih}$	Input high voltage (SEL, OEn pins)	1.7	$V_{CC}$	V
$V_{il}$	Input low voltage (SEL, OEn pins)	-0.1	0.8	V
$V_{diff}$	High-speed signal pins differential voltage	0	1.8	$V_{pp}$
$V_{cm}$	High speed signal pins common mode voltage	0	2	V
$T_A$	Operating free-air/ambient temperature	HD3SS3212RKS	0	70
		HD3SS3212IRKS	-40	85

### 7.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		HD3SS3212	UNIT
		RKS (VQFN)	
		20 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	46.6	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	41.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	4.4	°C/W
$\psi_{JT}$	Junction-to-top characterization parameter	17.6	°C/W
$\psi_{JB}$	Junction-to-board characterization parameter	1.6	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	17.6	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](http://SPRA953).

## 7.5 Electrical Characteristics

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{CC}$	Device active current	$V_{CC} = 3.3\text{ V}$ , $OEn = 0$		0.6	0.8	mA
$I_{STDN}$	Device shutdown current	$V_{CC} = 3.3\text{ V}$ , $OEn = V_{CC}$		5	20	$\mu\text{A}$
$C_{ON}$	Output ON capacitance			0.6		pF
$C_{OFF}$	Output OFF capacitance			0.8		pF
$R_{ON}$	Output ON resistance	$V_{CC} = 3.3\text{ V}$ ; $V_{CM} = 0$ to $2\text{ V}$ ; $IO = -8\text{ mA}$		5	8	$\Omega$
$\Delta R_{ON}$	On-resistance match between pairs of the same channel	$V_{CC} = 3.3\text{ V}$ ; $-0.35\text{ V} \leq V_{IN} \leq 2.35\text{ V}$ ; $IO = -8\text{ mA}$			0.5	$\Omega$
$R_{FLAT\_ON}$	On-resistance flatness $R_{ON}(\text{MAX}) - R_{ON}(\text{MAIN})$	$V_{CC} = 3.3\text{ V}$ ; $-0.35\text{ V} \leq V_{IN} \leq 2.35\text{ V}$			1	$\Omega$
$I_{IH\_CTRL}$	Input high current, control pins (SEL, OEn)				1	$\mu\text{A}$
$I_{IL\_CTRL}$	Input low current, control pins (SEL, OEn)				1	$\mu\text{A}$
$I_{IH\_HS}$	Input high current, high-speed pins [Ax/Bx/Cx][p/n]	$V_{IN} = 2\text{ V}$ for selected port, A and B with SEL = 0, and A and C with SEL = $V_{CC}$			1	$\mu\text{A}$
$I_{IH\_HS}$	Input high current, high-speed pins [Ax/Bx/Cx][p/n]	$V_{IN} = 2\text{ V}$ for non-selected port, C with SEL = 0, and B with SEL = $V_{CC}^{(1)}$		100	140	$\mu\text{A}$
$I_{IL\_HS}$	Input low current, high-speed pins [Ax/Bx/Cx][p/n]				1	$\mu\text{A}$

(1) There is a 20-k $\Omega$  pull-down in non-selected port.

## 7.6 High-Speed Performance Parameters

PARAMETER	TEST CONDITION	MIN	TYP	MAX	UNIT
$I_L$	Differential insertion loss		$f = 0.3\text{ MHz}$	-0.5	dB
			$f = 0.625\text{ MHz}$	-0.55	
			$f = 2.5\text{ GHz}$	-0.8	
			$f = 4\text{ GHz}$	-1.4	
			$f = 5\text{ GHz}$	-1.6	
BW	-3-dB bandwidth		8		GHz
$R_L$	Differential return loss		$f = 0.3\text{ MHz}$	-25	dB
			$f = 2.5\text{ GHz}$	-13	
			$f = 4\text{ GHz}$	-13	
			$f = 5\text{ GHz}$	-12	
$O_{IRR}$	Differential OFF isolation		$f = 0.3\text{ MHz}$	-75	dB
			$f = 2.5\text{ GHz}$	-23	
			$f = 4\text{ GHz}$	-19	
			$f = 5\text{ GHz}$	-19	
$X_{TALK}$	Differential crosstalk		$f = 0.3\text{ MHz}$	-90	dB
			$f = 2.5\text{ GHz}$	-35	
			$f = 4\text{ GHz}$	-32.5	
			$f = 5\text{ GHz}$	-32	

## 7.7 Switching Characteristics

PARAMETER		MIN	TYP	MAX	UNIT
$t_{PD}$	Switch propagation delay (see Figure 3)			80	ps
$t_{SW\_ON}$	Switching time SEL-to-Switch ON (see Figure 2)			0.5	$\mu$ s
$t_{SW\_OFF}$	Switching time SEL-to-Switch OFF (see Figure 2)			0.5	$\mu$ s
$t_{SK\_INTRA}$	Intra-pair output skew (see Figure 3)			6	ps
$t_{SK\_INTER}$	Inter-pair output skew (see Figure 3)			20	ps

## 9 Detailed Description

### 9.1 Overview

The HD3SS3212 is a generic analog differential passive switch that can work for any high-speed interface applications requiring a common mode voltage range of 0 to 2 V and differential signaling with differential amplitude up to 1800 mVpp. It employs adaptive tracking that ensures the channel remains unchanged for the entire common mode voltage range.

Excellent dynamic characteristics of the device allow high-speed switching with minimum attenuation to the signal eye diagram with very little added jitter. It consumes <2 mW of power when operational and has a shutdown mode exercisable by OEn pin resulting <20  $\mu$ W.

### 9.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

### 9.3 Feature Description

#### 9.3.1 Output Enable and Power Savings

The HD3SS3212 has two power modes, active/normal operating mode and standby/shutdown mode. During standby mode, the device consumes very-little current to save the maximum power. To enter standby mode, the OEn control pin is pulled high through a resistor and must remain high. For active/normal operation, the OEn control pin should be pulled low to GND or dynamically controlled to switch between H or L.

HD3SS3212 consumes <2 mW of power when operational and has a shutdown mode exercisable by the EN pin resulting <20  $\mu$ W.

## 9.4 Device Functional Modes

**Table 1. Port Select Control Logic<sup>(1)</sup>**

PORT A CHANNEL	PORT B OR PORT C CHANNEL CONNECTED TO PORT A CHANNEL	
	SEL = L	SEL = H
A0p	B0p	C0p
A0n	B0n	C0n
A1p	B1p	C1p
A1n	B1n	C1n

- (1) The HD3SS3212 can tolerate polarity inversions for all differential signals on Ports A, B, and C. Take care to ensure the same polarity is maintained on Port A versus Ports B/C.

## 10 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

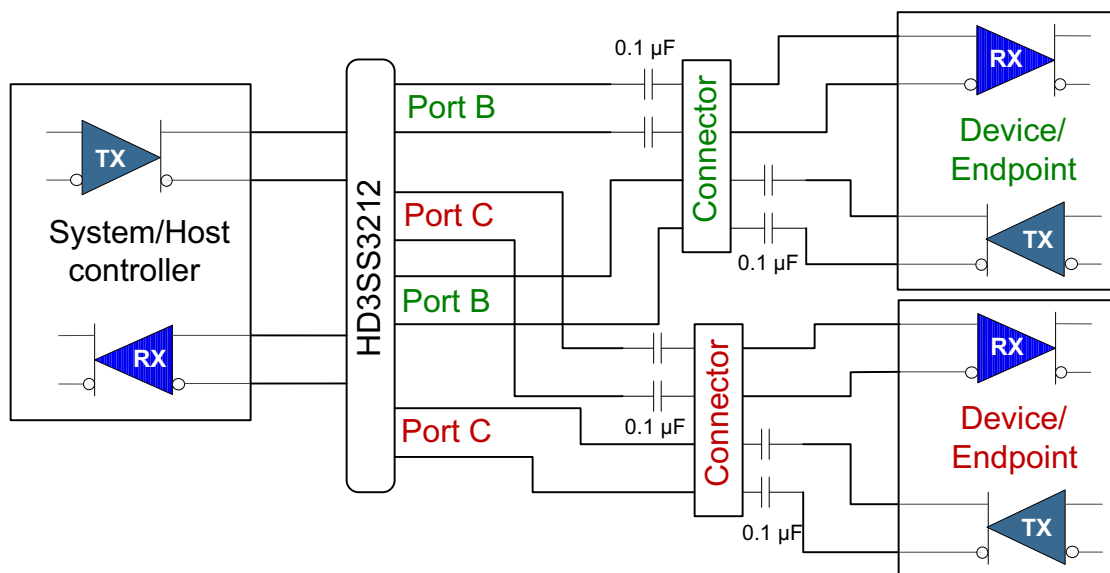

### 10.1 Application Information

The HD3SS3212 is a generic 2-channel high-speed mux/demux type of switch that can be used for routing high-speed signals between two different locations on a circuit board. The HD3SS3212 supports several high-speed data protocols with a differential amplitude of <math><1800\text{ mVpp}</math> and a common mode voltage of <math><2.0\text{ V}</math>, as with USB 3.0 and DisplayPort 1.2. The device's one select input (SEL) pin can easily be controlled by an available GPIO pin within a system or from a microcontroller.

The HD3SS3212 with its adaptive common mode tracking technology can support applications where the common mode is different between the RX and TX pair. The two USB3.1 Type C connector applications show both a host and device side. The cable between the two connectors swivels the pairs to properly route the signals to the correct pin. The other applications are more generic because different connectors can be used.

Many interfaces require AC coupling between the transmitter and receiver. The 0402 capacitors are the preferred option to provide AC coupling; 0603 size capacitors also work. Avoid the 0805 size capacitors and C-packs. When placing AC coupling capacitors, symmetric placement is best. A capacitor value of  $0.1\ \mu\text{F}$  is best, and the value should match for the  $\pm$ signal pair. The designer should place them along the TX pairs on the system board, which are usually routed on the top layer of the board.

The AC coupling capacitors have several placement options. Because the switch requires a bias voltage, the designer must place the capacitors on one side of the switch. If they are placed on both sides of the switch, a biasing voltage should be provided. [Figure 4](#) shows a few placement options. The coupling capacitors are placed between the switch and endpoint. In this situation, the switch is biased by the system/host controller.

**Figure 4. AC Coupling Capacitors between Switch TX and Endpoint TX**

In [Figure 5](#), the coupling capacitors are placed on the host transmit pair and endpoint transmit pair. In this situation, the switch on top is biased by the endpoint and the lower switch is biased by the host controller.

Application Information (continued)

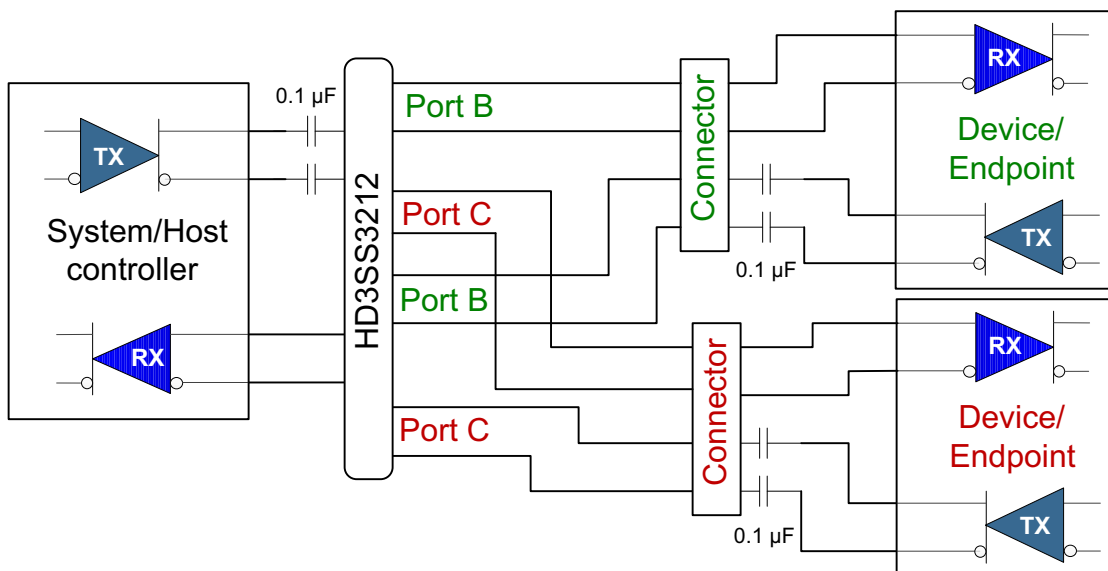

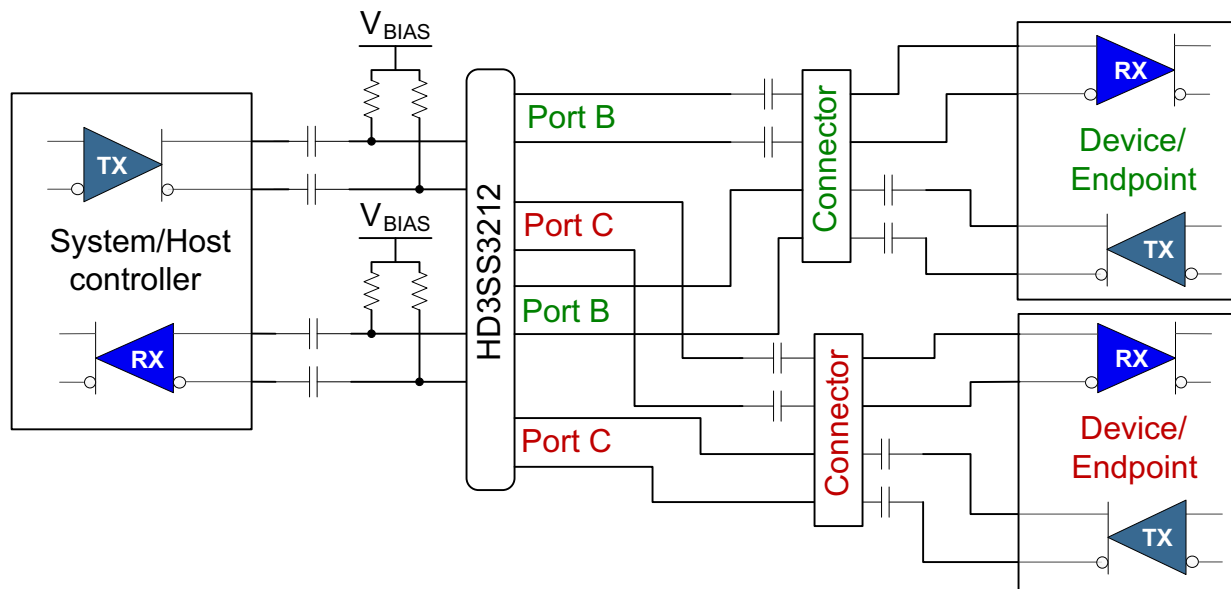

Figure 5. AC Coupling Capacitors on Host TX and Endpoint TX

In the case where the common mode voltage in the system is higher than 2 V, the coupling capacitors are placed on both sides of the switch (shown in Figure 6). A biasing voltage of <2 V is required in this case.

$V_{BIAS}$  can be GND

Capacitor and resistor values depend upon application

Figure 6. AC Coupling Capacitors on Both Sides of Switch

The HD3SS3212 can be used with the USB Type C connector to support the connector's flip ability. Figure 7 provides the generic location for the AC coupling capacitors for this application.

Application Information (continued)

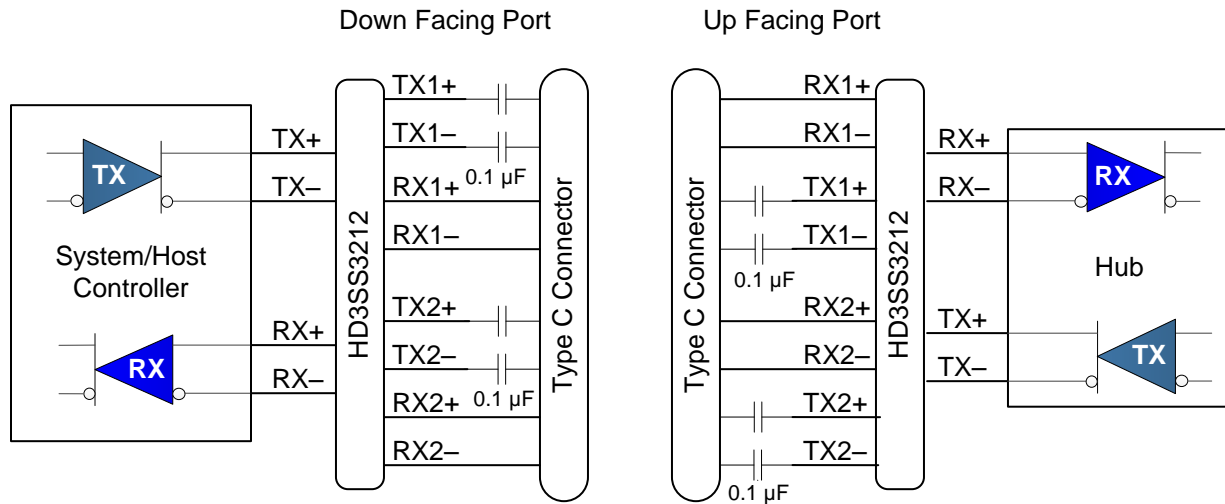

Figure 7. AC Coupling Capacitors for USB Type C

## 10.2 Typical Applications

### 10.2.1 Down Facing Port for USB3.1 Type C

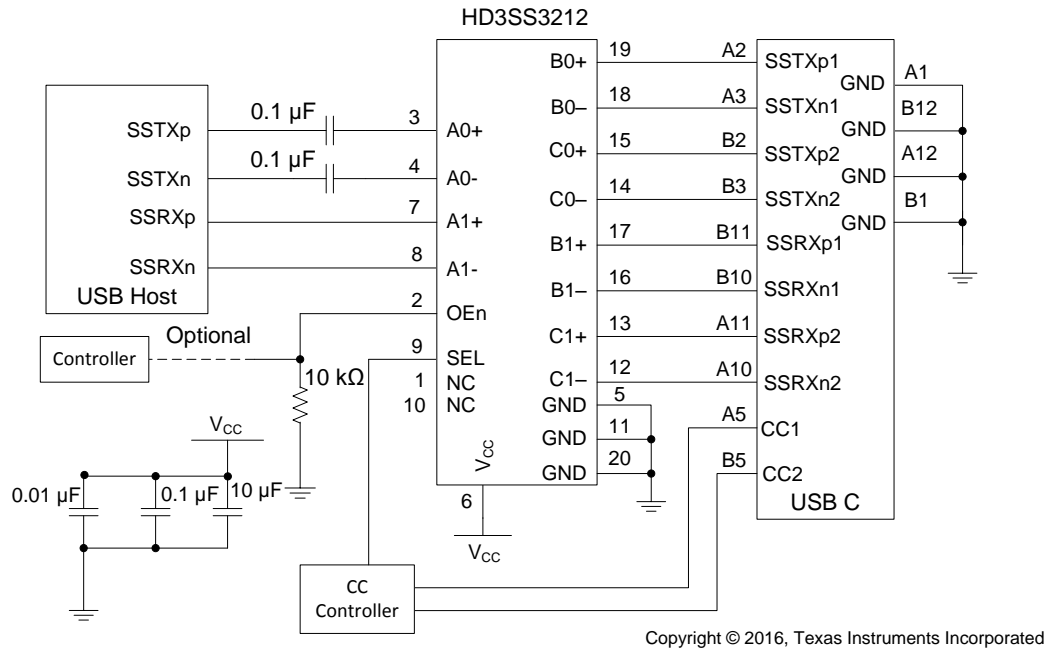

Figure 8. Down Facing Port for USB3.1 Type C Connector

#### 10.2.1.1 Design Requirements

The HD3SS3212 can be designed into many different applications. All the applications have certain requirements for the system to work properly. The HD3SS3212 requires 3.3-V  $\pm 10\%$   $V_{CC}$  rail. The OEn pin must be low for device to work otherwise it disables the outputs. This pin can be driven by a processor. The expectation is that one side of the device has AC coupling capacitors. Table 2 provides information on expected values to perform properly.

Table 2. Design Parameters

DESIGN PARAMETER	VALUE
$V_{CC}$	3.3 V
AXp/n, BXp/n, CXp/n CM input voltage	0 to 2 V
Control/OEn pin max voltage for low	0.8 V
Control/OEn pin min voltage for high	2.0 V
AC coupling capacitor	100 nF
$R_{BIAS}$ (Figure 8) when needed	1 k $\Omega$

#### 10.2.1.2 Detailed Design Procedure

The HD3SS3212 is a high-speed passive switch device that can behave as a mux or demux. Because this is a passive switch, signal integrity is important because the device provides no signal conditioning capability. The device can support 2 to 3 inches of board trace and a connector on either end.

To design in the HD3SS3212, the designer needs to understand the following.

- Determine the loss profile between circuits that are to be muxed or demuxed.
- Provide clean impedance and electrical length matched board traces.
- Depending upon the application, determine the best place to put the 100-nF coupling capacitor.
- Provide a control signal for the SEL and OEn pins.
- The thermal pad must be connected to ground.

- See the application schematics on recommended decouple capacitors from V<sub>CC</sub> pins to ground

## 11 Power Supply Recommendations

The HD3SS3212 does not require a power supply sequence. However, TI recommends that OEn is asserted low after device supply  $V_{CC}$  is stable and in specification. TI also recommends to place ample decoupling capacitors at the device  $V_{CC}$  near the pin.

## 12 Layout

### 12.1 Layout Guidelines

On a high-K board, TI always recommends to solder the PowerPAD™ onto the thermal land. A thermal land is the area of solder-tinned-copper underneath the PowerPAD package. On a high-K board, the HD3SS3212 can operate over the full temperature range by soldering the PowerPAD onto the thermal land without vias.

On a low-K board, for the device to operate across the temperature range, the designer must use a 1-oz Cu trace connecting the GND pins to the thermal land. A general PCB design guide for PowerPAD packages is provided in *PowerPAD Thermally-Enhanced Package*, [SLMA002](#).

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
