

## LM2664 Switched Capacitor Voltage Converter

 Check for Samples: [LM2664](#)

### FEATURES

- Inverts Input Supply Voltage
- 6-Pin SOT-23 Package
- 12Ω Typical Output Impedance
- 91% Typical Conversion Efficiency at 40 mA
- 1μA Typical Shutdown Current

### APPLICATIONS

- Cellular Phones
- Pagers
- PDAs
- Operational Amplifier Power Suppliers
- Interface Power Suppliers
- Handheld Instruments

### Basic Application Circuits

### DESCRIPTION

The LM2664 CMOS charge-pump voltage converter inverts a positive voltage in the range of +1.8V to +5.5V to the corresponding negative voltage of -1.8V to -5.5V. The LM2664 uses two low cost capacitors to provide up to 40 mA of output current.

The LM2664 operates at 160 kHz oscillator frequency to reduce output resistance and voltage ripple. With an operating current of only 220 μA (operating efficiency greater than 91% with most loads) and 1 μA typical shutdown current, the LM2664 provides ideal performance for battery powered systems. The device is in a SOT-23 package.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

All trademarks are the property of their respective owners.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## Absolute Maximum Ratings<sup>(1)(2)</sup>

Supply Voltage (V+ to GND, or GND to OUT)	5.8V
SD	(GND – 0.3V) to (V+ + 0.3V)
V+ and OUT Continuous Output Current	50 mA
Output Short-Circuit Duration to GND <sup>(3)</sup>	1 sec.
Continuous Power Dissipation (T <sub>A</sub> = 25°C) <sup>(4)</sup>	600 mW
T <sub>JMax</sub> <sup>(4)</sup>	150°C
θ <sub>JA</sub> <sup>(4)</sup>	210°C/W
Operating Junction Temperature Range	–40° to 85°C
Storage Temperature Range	–65°C to +150°C
Lead Temp. (Soldering, 10 seconds)	300°C
ESD Rating	2kV

- (1) Absolute maximum ratings indicate limits beyond which damage to the device may occur. Electrical specifications do not apply when operating the device beyond its rated operating conditions.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
- (3) OUT may be shorted to GND for one second without damage. However, shorting OUT to V+ may damage the device and should be avoided. Also, for temperatures above 85°C, OUT must not be shorted to GND or V+, or device may be damaged.
- (4) The maximum allowable power dissipation is calculated by using  $P_{DMax} = (T_{JMax} - T_A)/\theta_{JA}$ , where T<sub>JMax</sub> is the maximum junction temperature, T<sub>A</sub> is the ambient temperature, and θ<sub>JA</sub> is the junction-to-ambient thermal resistance of the specified package.

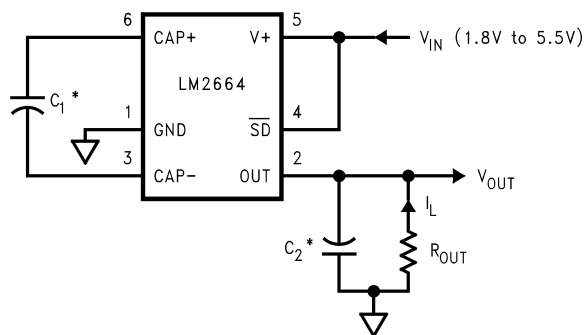

## Electrical Characteristics

Limits in standard typeface are for T<sub>J</sub> = 25°C, and limits in **boldface** type apply over the full operating temperature range. Unless otherwise specified: V+ = 5V, C<sub>1</sub> = C<sub>2</sub> = 3.3 μF.<sup>(1)</sup>

Symbol	Parameter	Condition	Min (2)	Typ (3)	Max (2)	Units
V+	Supply Voltage		<b>1.8</b>		<b>5.5</b>	V

- (1) In the test circuit, capacitors C<sub>1</sub> and C<sub>2</sub> are 3.3 μF, 0.3Ω maximum ESR capacitors. Capacitors with higher ESR will increase output resistance, reduce output voltage and efficiency.
- (2) Min. and Max. limits are ensured by design, test, or statistical analysis.
- (3) Typical numbers are not ensured but represent the most likely norm.
- (4) The minimum input high for the shutdown pin equals 40% of V+.
- (5) The maximum input low for the shutdown pin equals 20% of V+.
- (6) Specified output resistance includes internal switch resistance and capacitor ESR. See the details in the application information for simple negative voltage converter.
- (7) The output switches operate at one half of the oscillator frequency, f<sub>OSC</sub> = 2f<sub>SW</sub>.

TEST CIRCUIT

\*C<sub>1</sub> and C<sub>2</sub> are 3.3 μF, SC series OS-CON capacitors.

### Pin Descriptions

Pin	Name	Function
1	GND	Power supply ground input.
2	OUT	Negative voltage output.
3	CAP-	Connect this pin to the negative terminal of the charge-pump capacitor.
4	SD	Shutdown control pin, tie this pin to V+ in normal operation, and to GND for shutdown.
5	V+	Power supply positive voltage input.
6	CAP+	Connect this pin to the positive terminal of the charge-pump capacitor.

### Circuit Description

The LM2664 contains four large CMOS switches which are switched in a sequence to invert the input supply voltage. Energy transfer and storage are provided by external capacitors. Figure 15 illustrates the voltage conversion scheme. When  $S_1$  and  $S_3$  are closed,  $C_1$  charges to the supply voltage  $V+$ . During this time interval, switches  $S_2$  and  $S_4$  are open. In the second time interval,  $S_1$  and  $S_3$  are open; at the same time,  $S_2$  and  $S_4$  are closed,  $C_1$  is charging  $C_2$ . After a number of cycles, the voltage across  $C_2$  will be pumped to  $V+$ . Since the anode of  $C_2$  is connected to ground, the output at the cathode of  $C_2$  equals  $-(V+)$  when there is no load current. The output voltage drop when a load is added is determined by the parasitic resistance ( $R_{ds(on)}$  of the MOSFET switches and the ESR of the capacitors) and the charge transfer loss between capacitors. Details will be discussed in the following application information section.

Figure 15. Voltage Inverting Principle

## Application Information

### SIMPLE NEGATIVE VOLTAGE CONVERTER

The main application of LM2664 is to generate a negative supply voltage. The voltage inverter circuit uses only two external capacitors as shown in the Basic Application Circuits. The range of the input supply voltage is 1.8V to 5.5V.

The output characteristics of this circuit can be approximated by an ideal voltage source in series with a resistance. The voltage source equals  $-(V_+)$ . The output resistance  $R_{out}$  is a function of the ON resistance of the internal MOSFET switches, the oscillator frequency, the capacitance and ESR of  $C_1$  and  $C_2$ . Since the switching current charging and discharging  $C_1$  is approximately twice as the output current, the effect of the ESR of the pumping capacitor  $C_1$  will be multiplied by four in the output resistance. The output capacitor  $C_2$  is charging and discharging at a current approximately equal to the output current, therefore, its ESR only counts once in the output resistance. A good approximation of  $R_{out}$  is:

$$R_{OUT} \cong 2R_{SW} + \frac{2}{f_{OSC} \times C_1} + 4ESR_{C1} + ESR_{C2}$$

where  $R_{SW}$  is the sum of the ON resistance of the internal MOSFET switches shown in [Figure 15](#).

High capacitance, low ESR capacitors will reduce the output resistance.

The peak-to-peak output voltage ripple is determined by the oscillator frequency, the capacitance and ESR of the output capacitor  $C_2$ :

$$V_{RIPPLE} = \frac{I_L}{f_{OSC} \times C_2} + 2 \times I_L \times ESR_{C2}$$

Again, using a low ESR capacitor will result in lower ripple.

### SHUTDOWN MODE

A shutdown ( $\overline{SD}$ ) pin is available to disable the device and reduce the quiescent current to  $1\mu A$ . Applying a voltage less than 20% of  $V_+$  to the  $\overline{SD}$  pin will bring the device into shutdown mode. While in normal operating mode, the pin is connected to  $V_+$ .

### CAPACITOR SELECTION

As discussed in the *Simple Negative Voltage Converter* section, the output resistance and ripple voltage are dependent on the capacitance and ESR values of the external capacitors. The output voltage drop is the load current times the output resistance, and the power efficiency is

$$\eta = \frac{P_{OUT}}{P_{IN}} = \frac{I_L^2 R_L}{I_L^2 R_L + I_L^2 R_{OUT} + I_Q (V_+)}$$

Where  $I_Q(V_+)$  is the quiescent power loss of the IC device, and  $I_L^2 R_{out}$  is the conversion loss associated with the switch on-resistance, the two external capacitors and their ESRs.

The selection of capacitors is based on the specifications of the dropout voltage (which equals  $I_{out} R_{out}$ ), the output voltage ripple, and the converter efficiency. [Low ESR capacitors](#) are recommended to maximize efficiency, reduce the output voltage drop and voltage ripple.

**Table 1. Low ESR Capacitor Manufacturers**

Manufacturer	Phone	Capacitor Type
Nichicon Corp.	(708)-843-7500	PL & PF series, through-hole aluminum electrolytic
AVX Corp.	(803)-448-9411	TPS series, surface-mount tantalum
Sprague	(207)-324-4140	593D, 594D, 595D series, surface-mount tantalum
Sanyo	(619)-661-6835	OS-CON series, through-hole aluminum electrolytic
Murata	(800)-831-9172	Ceramic chip capacitors
Taiyo Yuden	(800)-348-2496	Ceramic chip capacitors
Tokin	(408)-432-8020	Ceramic chip capacitors

**Other Applications**

**PARALLELING DEVICES**

Any number of LM2664s can be paralleled to reduce the output resistance. Each device must have its own pumping capacitor  $C_1$ , while only one output capacitor  $C_{out}$  is needed as shown in Figure 16. The composite output resistance is:

$$R_{OUT} = \frac{R_{OUT \text{ of each LM2664}}}{\text{Number of Devices}}$$

**Figure 16. Lowering Output Resistance by Paralleling Devices**

**CASCADING DEVICES**

Cascading the LM2664s is an easy way to produce a greater negative voltage (e.g. A two-stage cascade circuit is shown in Figure 17).

If  $n$  is the integer representing the number of devices cascaded, the unloaded output voltage  $V_{out}$  is  $(-nV_{in})$ . The effective output resistance is equal to the weighted sum of each individual device:

$$R_{out} = nR_{out\_1} + n/2 R_{out\_2} + \dots + R_{out\_n} \tag{1}$$

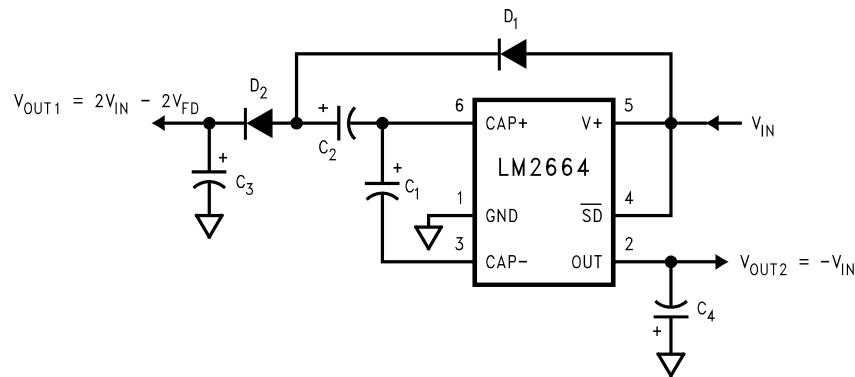

Note that, the number of  $n$  is practically limited since the increasing of  $n$  significantly reduces the efficiency, and increases the output resistance and output voltage ripple.

**Figure 17. Increasing Output Voltage by Cascading Devices**

**COMBINED DOUBLER AND INVERTER**

In Figure 18, the LM2664 is used to provide a positive voltage doubler and a negative voltage converter. Note that the total current drawn from the two outputs should not exceed 50 mA.

**Figure 18. Combined Voltage Doubler and Inverter**

**REGULATING V<sub>OUT</sub>**

It is possible to regulate the negative output of the LM2664 by use of a low dropout regulator (such as LP2980). The whole converter is depicted in Figure 19. This converter can give a regulated output from -1.8V to -5.5V by choosing the proper resistor ratio:

$$V_{out} = V_{ref} (1 + R_1/R_2) \tag{2}$$

where,  $V_{ref} = 1.23V$  (3)

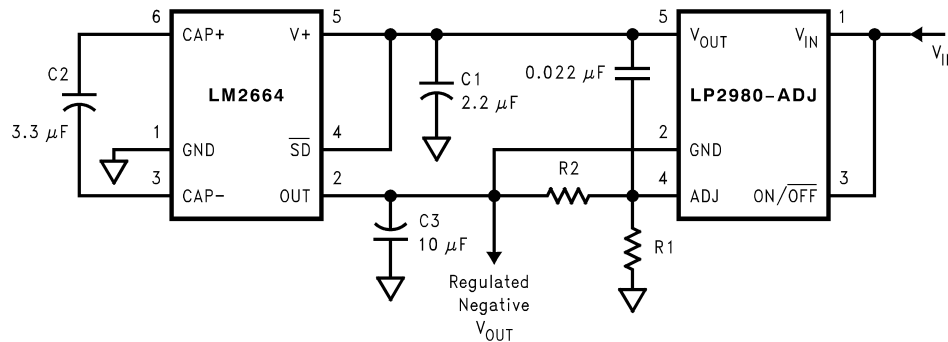

Note that, the following conditions must be satisfied simultaneously for worst case design:

$$V_{in\_min} > V_{out\_min} + V_{drop\_max} \text{ (LP2980)} \tag{4}$$

$$+ I_{out\_max} \times R_{out\_max} \text{ (LM2664)} \tag{5}$$

$$V_{in\_max} < V_{out\_max} + V_{drop\_min} \text{ (LP2980)} \tag{6}$$

$$+ I_{out\_min} \times R_{out\_min} \text{ (LM2664)} \tag{7}$$

**Figure 19. Combining LM2664 with LP2980 to Make a Negative Adjustable Regulator**

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
