SUPPLY-VOLTAGE SUPERVISOR

Check for Samples: TL7700

FEATURES

- **Adjustable Sense Voltage With Two External Resistors**
- **Adjustable Hysteresis of Sense Voltage**
- **Wide Operating Supply-Voltage Range: 1.8 V to 40 V**
- **Wide Operating Temperature Range: –40°C to 85°C**
- **Low Power Consumption: I_{CC} = 0.6 mA Typ, V_{CC} = 40 V**
- **Minimum External Components**
- **Now Available in MSOP (DGK) package**

NC – No internal connection

DESCRIPTION/ORDERING INFORMATION

The TL7700 is a bipolar integrated circuit designed for use as a reset controller in microcomputer and microprocessor systems. The SENSE voltage can be set to any value greater than 0.5 V using two external resistors. The hysteresis value of the sense voltage also can be set by the same resistors. The device includes a precision voltage reference, fast comparator, timing generator, and output driver, so it can generate a power-on reset signal in a digital system.

The TL7700 has an internal 1.5-V temperature-compensated voltage reference from which all function blocks are supplied. Circuit function is very stable, with supply voltage in the 1.8-V to 40-V range. Minimum supply current allows use with ac line operation, portable battery operation, and automotive applications.

ORDERING INFORMATION(1)

T_A	PACKAGE(2)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	PDIP – P	Tube of 50	TL7700CP	TL7700CP
	SOP – PS	Reel of 2000	TL7700CPSR	T7700
	TSSOP – PW	Tube of 150	TL7700CPW	T7700
		Reel of 2000	TL7700CPWR	
	MSOP – DGK	Reel of 250	TL7700CDGKT	9TS
		Reel of 2500	TL7700CDGKR	

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
(2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

TERMINAL FUNCTIONS

TERMINAL			DESCRIPTION
NAME	NO.		
	P, PS, PW	DGK	
CT	1	3	Timing capacitor connection. This terminal sets the RESET output pulse duration (t_{po}). It is connected internally to a 15-µA constant-current source. There is a limit on the switching speed of internal elements; even if CT is set to 0, response speeds remain at approximately 5 to 10 µs. If CT is open, the device can be used as an adjustable-threshold noninverting comparator. If CT is low, the internal output-stage comparator is active, and the $\overline{\text{RESET}}$ output transistor is on. An external voltage must not be applied to this terminal due to the internal structure of the device. Therefore, drive the device using an open-collector transistor, FET, or 3-state buffer (in the low-level or high-impedance state).
GND	4	5	Ground. Keep this terminal as low impedance to reduce circuit noise.
NC	3, 6, 7	2, 6, 7	No internal connection
$\overline{\text{RESET}}$	8	1	Reset output. This terminal can be connected directly to a system that resets in the active-low state. A pullup resistor usually is required because the output is an npn open-collector transistor. An additional transistor should be connected when the active-high reset or higher output current is required.
SENSE	2	4	Voltage sense. This terminal has a threshold level of 500 mV. The sense voltage and hysteresis can be set at the same time when the two voltage-dividing resistors are connected. The reference voltage is temperature compensated to inhibit temperature drift in the threshold voltage within the operating temperature range.
V_{CC}	5	8	Power supply. This terminal is used in an operating-voltage range of 1.8 V to 40 V.

ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

V_{CC}	Supply voltage(2)		41 V
V_s	Sense input voltage range		–0.3 V to 41 V
V_{OH}	Output voltage (off state)		41 V
I_{OL}	Output current (on state)		5 mA
θ_{JA}	Package thermal impedance(3) (4)	P package	85°C/W
		PS package	95°C/W
		PW package	149°C/W
		DGK package	172°C/W
T_J	Operating virtual-junction temperature		150°C
T_{stg}	Storage temperature range		–65°C to 150°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to the network ground terminal.
(3) Maximum power dissipation is a function of $T_J(max)$, θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) – T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can impact reliability.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS

		MIN	MAX	UNIT
V_{CC}	Supply voltage	1.8	40	V
I_{OL}	Low-level output current		3	mA
T_A	Operating free-air temperature	–40	85	°C

ELECTRICAL CHARACTERISTICS

V_{CC} = 3 V (unless otherwise noted)

PARAMETER		TEST CONDITIONS	T_A	MIN	TYP	MAX	UNIT
V_s	SENSE input voltage		25°C	495	500	505	mV
			–40°C to 85°C	490		510	
I_s	SENSE input current	V_s = 0.4 V	25°C	2	2.5	3	µA
			–40°C to 85°C	1.5		3.5	
I_{CC}	Supply current	V_{CC} = 40 V, V_s = 0.6 V, No load	25°C		0.6	1	mA
V_{OL}	Low-level output voltage	I_{OL} = 1.5 mA	25°C			0.4	V
		I_{OL} = 3 mA	25°C			0.8	
I_{OH}	High-level output current	V_{OH} = 40 V, V_s = 0.6 V	–40°C to 85°C			1	µA
I_{CT}	Timing-capacitor charge current	V_s = 0.6 V	25°C	11	15	19	µA

SWITCHING CHARACTERISTICS

V_{CC} = 3 V, T_A = 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{pi}	SENSE pulse duration	C_T = 0.01 µF	2			µs

DETAILED DESCRIPTION

Sense-Voltage Setting

The SENSE terminal input voltage, Vs, of the TL7700 typically is 500 mV. By using two external resistors, the circuit designer can obtain any sense voltage over 500 mV. In Figure 19, the sensing voltage, Vs', is calculated as:

$$V_{s'} = V_s \times (R1 + R2)/R2$$

Where:

V_s = 500 mV typ at T_A = 25°C

At room temperature, V_s has a variation of 500 mV ± 5 mV. In the basic circuit shown in Figure 19, variations of [±5 ± (R1 + R2)/R2] mV are superimposed on V_s.

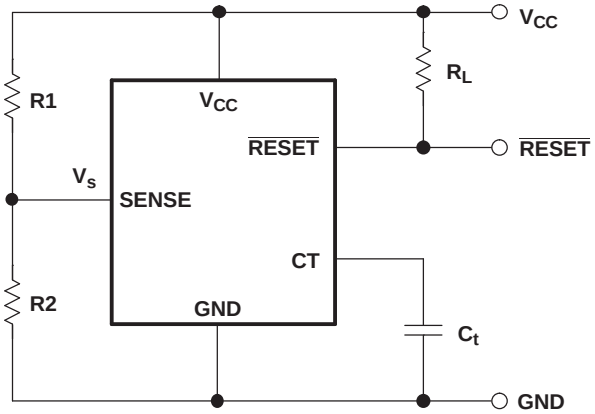

Figure 19.

Sense-Voltage Hysteresis Setting

If the sense voltage ($V_{s'}$) does not have hysteresis in it, and the voltage on the sensing line contains ripples, the resetting of TL7700 is unstable. Hysteresis is added to the sense voltage to prevent such problems. As shown in Figure 20, the hysteresis (V_{hys}) is added, and the value is determined as:

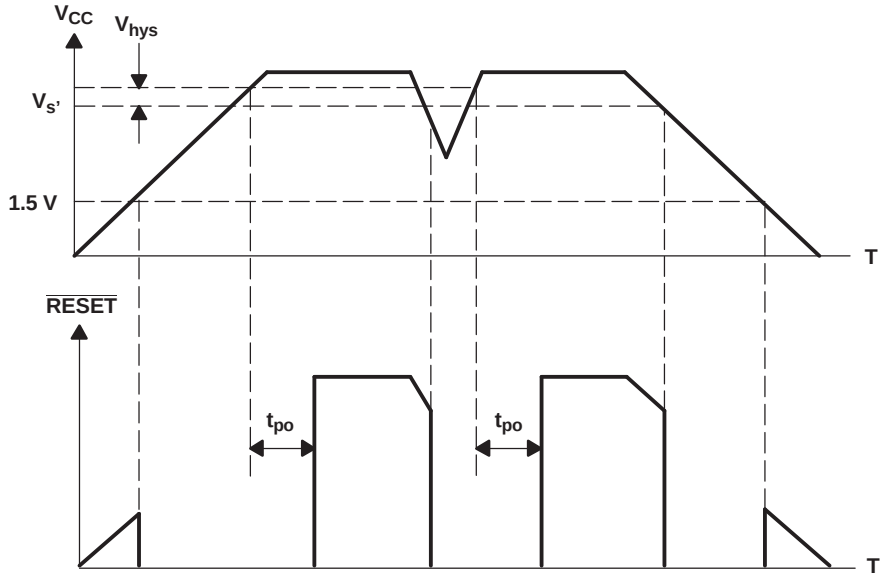
$$V_{hys} = I_s \times R1$$

Where:

I_s = 2.5 µA typ at T_A = 25°C

At room temperature, Is has variations of 2.5 mA ± 0.5 mA. Therefore, in the circuit shown in Figure 19, V_{hys} has variations of (±0.5 × R1) mV. In circuit design, it is necessary to consider the voltage-dividing resistor tolerance and temperature coefficient in addition to variations in V_s and V_{hys}.

Copyright © 1999–2011, Texas Instruments Incorporated



A. The sense voltage, $V_{S'}$, is different from the SENSE terminal input voltage, V_S. V_S normally is 500 mV for triggering.

Figure 20. V_{CC}-RESET Timing Chart

Output Pulse-Duration Setting

Constant-current charging starts on the timing capacitor when the sensing-line voltage reaches the TL7700 sense voltage. When the capacitor voltage exceeds the threshold level of the output drive comparator, $\overline{\text{RESET}}$ changes from a low to a high level. The output pulse duration is the time between the point when the sense-pin voltage exceeds the threshold level and the point when the $\overline{\text{RESET}}$ output changes from a low level to a high level. When the TL7700 is used for system power-on reset, the output pulse duration, t_{po}, must be set longer than the power rise time. The value of t_{po} is:

$$t_{po} = C_t \times 10^5 \text{ seconds}$$

Where:

C_t is the timing capacitor in farads

There is a limit on the device response speed. Even if $C_t = 0$, t_{po} is not 0, but approximately 5 µs to 10 µs. Therefore, when the TL7700 is used as a comparator with hysteresis without connecting C_t, switching speeds (t_r/t_f, t_{po}/t_{pd}, etc.) must be considered.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
